**Subject:** Buckeye Air Sample Results

Keith,

I sent all of these e-mails to Mr. Bevis yesterday, but forgot to send you a copy. If you scroll through the e-mail, below, you will find Dr. Mark Johnson's review of our data and Buckeye's data. I didn't tell him about those low-level hits of bromodichloromethane, chloroform, and dibromochloromethane in those two residential locations, so he reviewed them and made some comments on them. I should note that the resampling that Buckeye and U.S. EPA conducted on Thursday at those two locations didn't show these compounds.

I will forward you our lab results (which includes 2 residential wells that were resampled and the Summa Sample results).

I'll also forward you the data I got yesterday from Buckeye, in case they didn't send it to you.

Hope all is well!

Craig Thomas

I forgot to mention that I also had Dr. Mark Johnson look over the latest data I got from Buckeye this morning (so when you see him talking about soil sampling, his referring to the data in the Buckeye e-mail). I am not sure if either of you received e-mails from Buckeye, so I will forward that message as well.

Thanks!

Craig Thomas

Craig

Here are my observations:

- 1) Residential well sampling: There are no PAH detections in the wells. There are low level detections of bromodichloromethane, chloroform, and dibromochloromethane, but the concentrations are below EPA Removal Action Levels and EPA Drinking Water standards.
- 2) Soil Sampling: Benzo(a)pyrene levels in several samples slightly exceed the IEPA TACO Tier 1 criteria for direct contact. However, all PAH detections are below EPA Removal Action Levels.
- 3) Air sampling: Only dichlorodifluoromethane and toluene were detected in SUMMA samples, but at levels well below those of health concern. These detections were no different between upwind and downwind samples, which may indicate either low level lab contamination or general ambient air concentrations.
- 4) Surface water: Not considered to be a human exposure pathway

Let me know if you have questions.

Mark

Mark,

Here's the latest data on the Buckeye incident

Craig,

Attached you will find data tables containing the FINAL data for potable well, surface water, and soil samples that we have received from the laboratory to date. Total waste accumulations as of this afternoon are as follows:

Water → 89,878

Product → 430 gallons

Soil → 1,252

Please note that I will be resuming Agency updates for Wood River Pipe Lines LLC, in lieu of Krista.

Feel free to contact me if you need any additional information.

Thanks,
